SECTION 1

Executive Summary

Verdis Chain is a carbon-negative Layer-1 blockchain built on Substrate, powered by native Delegated Proof-of-Stake (DPoS) consensus, an integrated AMM decentralized exchange (DEX), ink! smart contracts, and on-chain carbon credit tracking.

The native token, **VRDX**, has a fixed supply of **100 billion** with **9 decimals**, serving as gas, staking asset, governance instrument, and medium of exchange.

Verdis Chain connects to **EvolvixOS**, an AI Engineering Operating System providing smart contract auditing, AI-powered development tools, and a plugin marketplace.

100B TOTAL SUPPLY	6s BLOCK TIME	21 VALIDATORS	6 DEX POOLS
30+ PALLETS	\$500M FDV	\$18M RAISED	8B TGE CIRC.

SECTION 2

Problem Statement

Traditional blockchains consume enormous energy. Carbon markets are fragmented. AI and blockchain operate in isolation. Verdis Chain addresses all three.

SECTION 3

Solution Overview

Carbon-Negative Consensus

DPoS uses 99.9% less energy than PoW. Green validator scoring rewards renewable energy.

On-Chain Carbon Credits

Full transparency from source to retirement. No double-counting.

AI-Powered Security

Every contract analyzed by EvolvixOS AI before deployment.

Native AMM DEX

6 liquidity pools, overflow-protected arithmetic.

SECTION 4

Technical Architecture

PARAMETER	VALUE	DESCRIPTION
Framework	Substrate	Modular blockchain framework
Consensus	DPoS + BABE/GRANDPA	Block production + finality
Block Time	6 seconds	BABE slot time
Smart Contracts	ink! / WASM	Substrate-native
Token	VRDX (9 decimals)	Native gas + staking
Supply	100,000,000,000	Fixed supply
DEX	Native AMM	6 pools
Cross-Chain	IBC	Inter-Blockchain Communication
Validator Target	21	DPoS active set

SECTION 5

DPoS Consensus

21 target validators selected by delegated stake. Green scoring rewards renewable energy. Slashing penalizes malicious behavior. Staking APR: 5-6.67% at 30-40% stake rate. 20B VRDX staking pool.

SECTION 6

AMM DEX

POOL	PAIR	INITIAL LIQUIDITY
Pool 1	VRDX/ECO	500,000 VRDX
Pool 2	VRDX/CARBON	300,000 VRDX
Pool 3	VRDX/TREE	200,000 VRDX
Pool 4	VRDX/GREEN	200,000 VRDX
Pool 5	ECO/CARBON	100,000 ECO
Pool 6	VRDX/REDD	100,000 VRDX

SECTION 7

Carbon Credits & Eco Layer

Carbon credits minted, traded, and retired on-chain. Green validator scoring (1-5). Reforestation projects logged with GPS, tree count, CO2 estimates. AI verification via EvolvixOS.

SECTION 8

EvolvixOS Integration

Smart Contract Auditing

AI analyzes every contract before deployment. Security scores published on-chain.

AI Governance

AI simulates economic impact of proposals, provides recommendations.

Carbon Verification

Satellite imagery + IoT + AI for autonomous reforestation verification.

SECTION 9

Tokenomics & Distribution

CATEGORY	ALLOCATION	%	PURPOSE
Ecosystem & Grants	25B	25%	Grants, partnerships
PoS Staking	20B	20%	Validator rewards
Treasury	15B	15%	DAO-governed
Development	10B	10%	Core development
Liquidity	10B	10%	DEX liquidity
Community	5B	5%	Rewards, airdrops
Team & Advisors	5B	5%	12-mo cliff vesting
Seed / Strategic	3B	3%	12-mo cliff
Public Presale	2B	2%	6-mo cliff

SECTION 10

Vesting & Cliff Roadmap (From TGE Day)

Every unlock event is measured from **Day 0 (TGE — Token Generation Event)**. This is the day tokens are sold and released to the market. All cliffs, vesting periods, and circulating supply milestones are calculated from this date.

Unlock Events

Day 0 — TGE

Initial circulating: **8B VRDX (8%)**. All investor tokens locked (0% unlocked). Liquidity seeded, DEX active, staking begins.

Month 3 — Community Cliff Ends

Community round (1B at \$0.003) 3-month cliff completes. 20% TGE release. Linear vesting: **53.3M/month** over 15 months.

Month 6 — Presale Cliff Ends

Presale (2B at \$0.004) 6-month cliff completes. 25% TGE release. Linear vesting: **250M/month** over 6 months.

Month 12 — Seed & Team Cliff Ends

Seed/Private (3B) and Team (5B) 12-month cliffs complete. 0% unlocked at TGE. Seed: **125M/month** over 24 months. Team: **138.9M/month** over 36 months.

Month 36 — Seed Fully Vested

All 3B Seed/Private tokens unlocked. 24 months of linear vesting complete.

Month 48 — Team Fully Vested

All 5B Team & Advisor tokens unlocked. All investor and team tokens now circulating.

Year 10 — Full Ecosystem Unlock

Ecosystem (25B) and Staking (20B) fully released. **95B+ VRDX circulating (95%+)**.

Unlock Schedule (From TGE Day)

TIME FROM TGE	EVENT	UNLOCKED	CIRCULATING	%
Day 0	TGE — tokens sold	8B	8,000,000,000	8.0%
			~8,360,000,000	~8.4%

TIME FROM TGE	EVENT	UNLOCKED	CIRCULATING	%
Month 3	Community cliff ends	+53.3M/mo		
Month 6	Presale cliff ends	+250M/mo	~9,500,000,000	~9.5%
Month 12	Seed + Team cliff ends	+263.9M/mo	~11,500,000,000	~11.5%
Month 24	Community + Presale vested	~263.9M/mo	~24,300,000,000	~24.3%
Month 36	Seed fully vested	~138.9M/mo	~39,300,000,000	~39.3%
Month 48	Team fully vested	~140M/mo	~56,900,000,000	~56.9%
Year 5	Ecosystem emission	~2B/yr	~65,000,000,000	~65.0%
Year 10	Full unlock	95B+	~95,000,000,000	~95.0%

Circulating Supply Growth (From TGE Day)

Day 0		8B	8%
Month 3		8.4B	8.4%
Month 6		9.5B	9.5%
Month 12		11.5B	11.5%
Month 24		~24B	24%
Month 36		~39B	39%
Month 48		~57B	57%
Year 5		~65B	65%
Year 10		~95B	95%

Key Insight

From TGE day, only 8% of tokens are circulating. Investor tokens are fully locked with 3-12 month cliffs. The first unlock is at Month 3 (Community). The largest wave starts at Month 12 (Seed + Team). This design prevents dump pressure and ensures long-term price stability.

SECTION 11

Fundraising & Staking

ROUND	PRICE	TOKENS	RAISED	CLIFF
Seed	\$0.0015	3B	\$4.5M	12 months
Community	\$0.003	1B	\$3M	3 months
Presale	\$0.004	2B	\$8M	6 months
TGE/IDO	\$0.005	0.5B	\$2.5M	None
Total		6.5B	\$18M	

Staking: 20B pool, 5-6.67% APR at 30-40% stake. Validators earn block rewards + DEX fees.

SECTION 12

Roadmap

Phase 1 (Q1 2026): Genesis & TGE — 8B VRDX circulating, all investor tokens locked.

Phase 2 (Q2 2026): DPoS staking & DEX activation — 21 validators, 8.2B bonded.

Phase 3 (Q3 2026): Eco precompiles & presale unlock — carbon credits active.

Phase 4 (Q1 2027): Seed + Team cliff end — all vesting active, DAO governance.

Phase 5 (2027-2030): Global carbon offset scaling — 10M+ tCO₂e retired.

Phase 6 (2030-2032): AI-powered governance — hybrid human-AI DAO.

Phase 7 (2030-2033): Cross-chain carbon credits — IBC, 100M+ tCO₂e/yr.

Phase 8 (2031-2034): ZK rollup — 10,000+ TPS, sub-cent fees.

SECTION 13

Team

Dorian Jean	CEO & Founder
Mark Jamestown	CTO
Elizabeth Jefferson	Head of Product
Rojs Gordons	Co-Founder & Community
María Dolores Márquez de Prado	Legal Counsel
Ignacio Martínez-Arrieta	Legal & Compliance

SECTION 14

Conclusion

Verdis Chain proves blockchain can be environmentally regenerative. By embedding carbon credits, green scoring, and reforestation into consensus, sustainability becomes a protocol-level feature.

With 30+ pallets, native AMM DEX, ink! contracts, DPoS, IBC, and EvolvixOS AI integration, Verdis provides a complete green technology stack.

The 100B VRDX economy incentivizes decentralization, security, and environmental impact — with structured vesting from TGE day preventing dump pressure.

This is not a promise. This is architecture.
